

# Image recognition and image similarity

A different approach for accessing large scale  
digital collections

# Project background

- Numerous digitization projects since 1997
  - Manuscripts, incunabula, newspapers, books
  - Up to 1 M objects from 8th - 20th century
- Deep indexing available only for a part of the books

→ Where are the images?

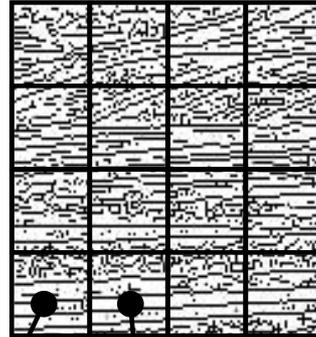

# Seeking for a different approach: The image-based similarity search

- 2011: Start of cooperation with the *Fraunhofer Heinrich Hertz Institute Berlin (core technology)*
  - Based upon existing expertise of Fraunhofer HHI
  - Initiated by Dr. Markus Brantl (head of Dig. Library Dept.)
- 2012: First prototypical implementation (250 volumes)
  - Optimization for BSB's holdings
  - Development of API and web interface
- Online since April 2013

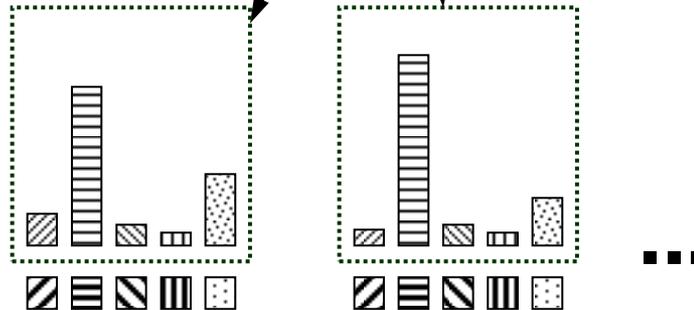

# How it works

# How it works: Edge detection and description

Edges, ie transitions between areas of different brightness

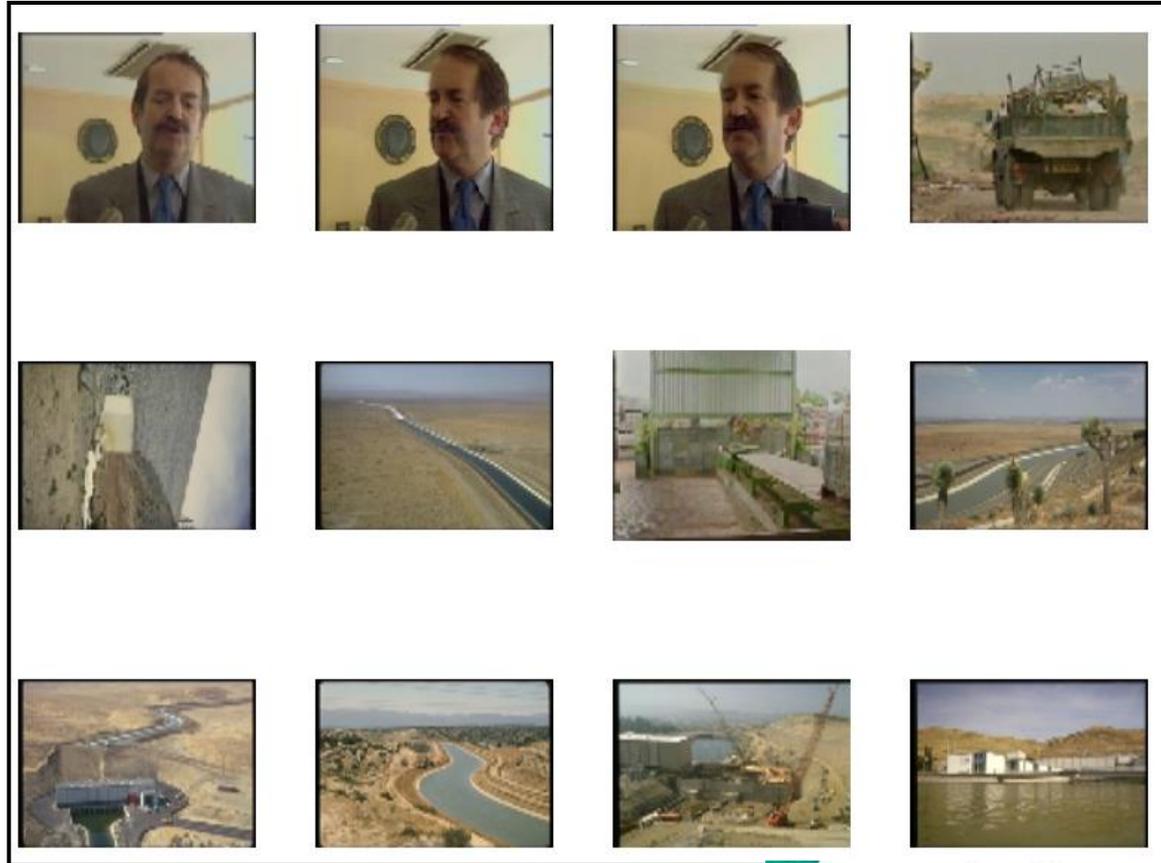

→ edge histogram  
→ image descriptor

# How it works: Color distribution

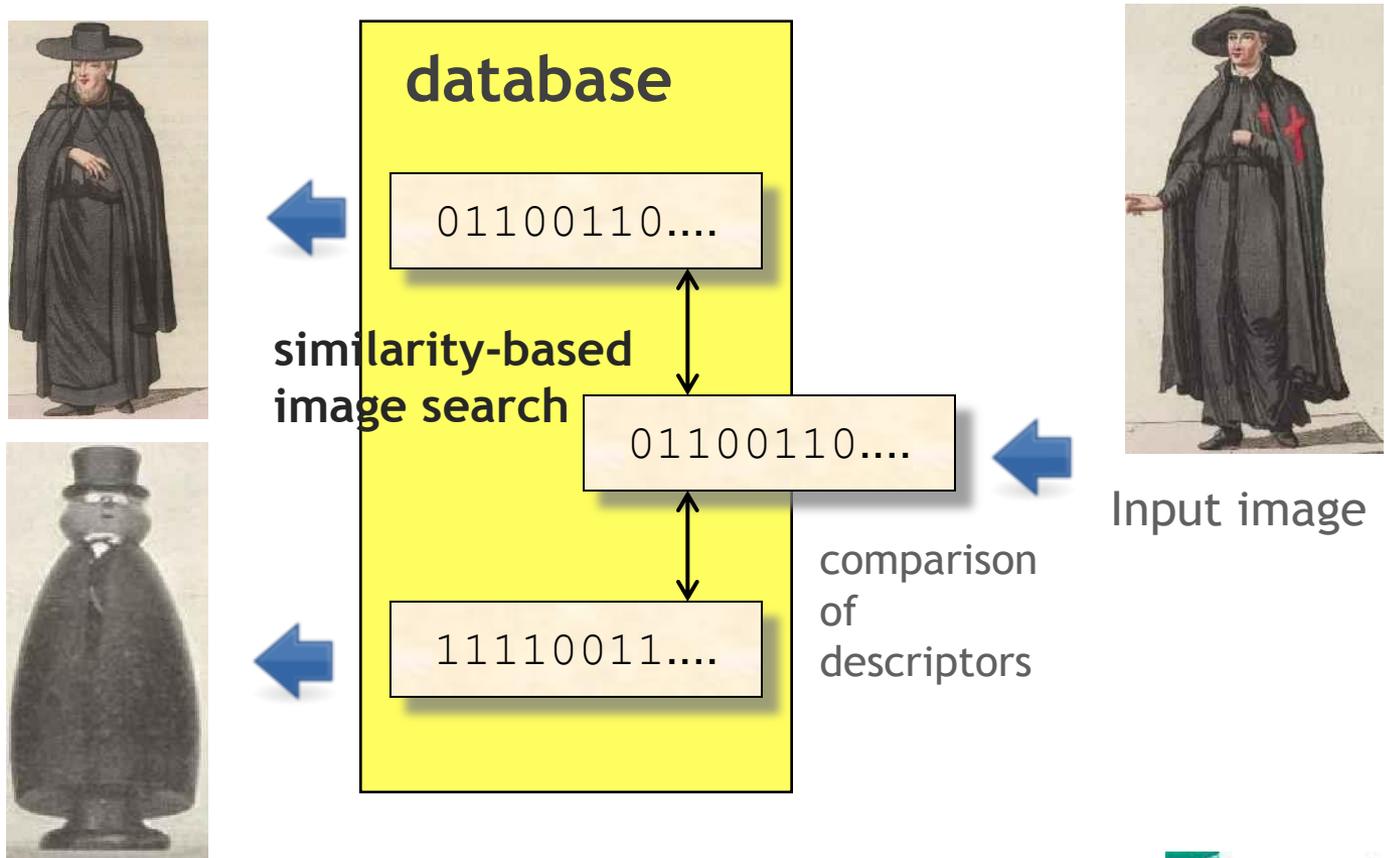

Color  
distribution

# How it works

1. *One-time* processing of each image
  - Analyzing properties
  - Generation of a unique descriptor
  - Filling an index of descriptors
2. Index is loaded into RAM permanently
  - High availability for the application
  - Fast search among millions of images

# The similarity search in practice

Search results

# Additional challenges with BSB's holdings

- Recognition of images inside of pages
- Image/text separation

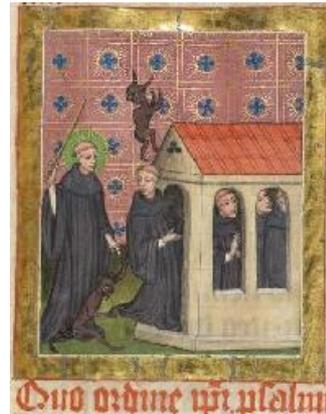

# Additional challenges with BSB's holdings

- Recognition of multiple images per page (segmentation)

# Additional challenges with BSB's holdings

- Recognition of book illumination, initials, drawings, woodcuts, copperplate engravings, old newspaper photographs, ...

# Recognition accuracy

## Some examples

# Recognition accuracy, example #1

Similar body shape, dress colour and foot position

# Recognition accuracy, example #2

Coat of arms: similar shape, similar background - and a striking (red) tongue

[http://bildsuche.digitale-sammlungen.de/index.html?c=suche\\_sim&bandnummer=bsb00001649&pimage=00080&einzelsegmentsuche=1&einzelsegment=1&l=de](http://bildsuche.digitale-sammlungen.de/index.html?c=suche_sim&bandnummer=bsb00001649&pimage=00080&einzelsegmentsuche=1&einzelsegment=1&l=de)

# Recognition accuracy, example #3

The same printing plate used for different books, with different coloration

# Recognition accuracy, example #3

[http://bildsuche.digitale-sammlungen.de/index.html?c=suche\\_sim&bandnummer=bsb00026765&pimage=4&einzelsegmentsuche=1&einzelsegment=1&l=de](http://bildsuche.digitale-sammlungen.de/index.html?c=suche_sim&bandnummer=bsb00026765&pimage=4&einzelsegmentsuche=1&einzelsegment=1&l=de)

# Recognition accuracy, example #4

# Recognition accuracy, example #5

Church interior and train station halls - similar shapes & lighting conditions

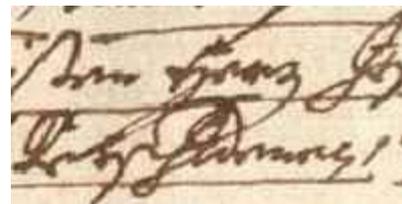

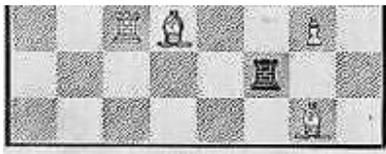

# Recognition accuracy, example #6

Four legs on the ground ...

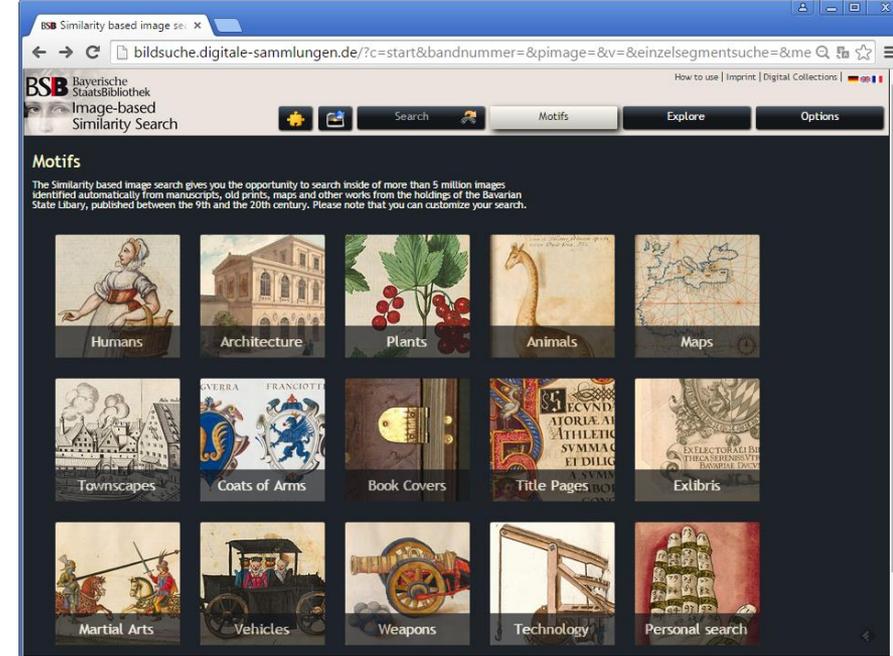

# The limits of image recognition

- Stains & ripped pages
- Decorative headlines
- Exceptional shapes
- Table Works
- Newspaper ads
- Sheet music
- ...

# Web application - Functionalities overview

- Explorative access
- Customizable Simple Search
- Skimming of books
- All images from one book
- Compare your own image - Upload

## Motifs

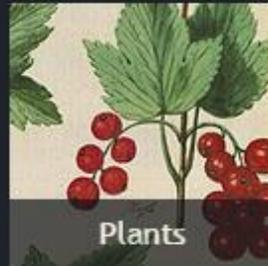

The Similarity based image search gives you the opportunity to search inside of more than 5 million images identified automatically from manuscripts, old prints, maps and other works from the holdings of the Bavarian State Library, published between the 9th and the 20th century. Please note that you can customize your search.

Color Edge Ratio: This controller weights the color edge ratio of the search. A value of 0.5 considers colors and edges equally.

0.55

Edges

Colors

Minimum similarity: This controller sets the minimum similarity. The higher the value, the higher the similarity, while 1.0 would be congruence. It is recommended to set a value of at least 0.85 but not higher than 0.95.

Minimum similarity 0.85

Results: Maximum number of results to be displayed

## Personal search

### Upload your own image as a template for an image search

Please note:

- use image files of format JPG or JPEG only
- to obtain satisfying results, use a resolution of 150 - 300 ppi
- limit is 1500 KB per file
- timeout of at least 1 minutes after each upload
- the uploaded file will be deleted after the search

# Main benefits of image-based similarity search

- Reliable recognition of images
- Optimized for the specific holdings of the BSB
  - Paintings, woodcuts, copperplate engravings, photographs
  - Color or b/w
- Separation of images from text
- Customizable
- High performance even with large amounts of data

# Outlook

## Today

- 85.000 digitized works indexed
  - 2,878,261 pages
  - 5,423,025 images available

## Planned for 2015/2016

- 1 Mio. digitized works (complete digital collections)
  - 50 M. images assumed
